CERTIFICATIONS

- Infosys Certified Tableau Developer
- Infosys Certified Kanban Practitioner
- SQL for Data Analytics & BI — Udemy
- Certificate of SQL — HackerRank

PROJECTS

Help-Desk Tableau Dashboard

Incident report generator using Tableau & Excel.

TEDx Talks Dashboard

Global data challenge via SQL & Tableau.

Space Mission Dashboard

Space missions 1957–2022 analysis.

SUMMARY

Senior Data Engineer with 7 years of experience delivering Business Intelligence solutions across different domains. Confident communicator who translates complex data into actionable insights for end-users. Experienced in Agile methodology, SQL, Tableau, Excel, and ETL with strong proficiency in Data Transformation and Data Blending. Skilled at handling large and complex datasets with sound decisions on data availability.

EXPERIENCE

Senior Data Engineer · [Innovaccer](#)

Jan 2024 – Present

- Ingested and processed multiple data categories — encounters, procedures, appointments, diagnoses, and patient demographics, financial, HRAs, Marketing — into a unified data pipeline for downstream analytics.
- Ran propensity models on patient datasets to generate risk scores, enabling care teams to prioritise high-risk patient interventions.
- Built ETL workflows to ingest data and insurance, financial, clinical datasets from multiple client systems, ensuring compliance with internal data standards.
- Designed interactive and dynamic tableau dashboards to effectively visualize complex data sets and KPIs, enabling stakeholders to quickly identify trends and insights
- Implemented data validation and error handling on data, reducing inaccuracies and maintaining dashboard quality.
- Implemented Python scripts to load data from SFTP to S3, minimising execution time with multiprocessing.
- Mentored juniors to follow organisation's best practices across all deliveries.

Data Analyst · [ZS Associates](#)

Oct 2021 – Jan 2024

- Worked with pharma clients to translate data and sales performance needs into actionable Business Intelligence dashboards in Tableau.
- Built ETL pipeline on Dataiku using Python and Snowflake SQL to ingest and transform datasets; automated data ingestion.
- Coded Python scripts for loading data from SharePoint to S3 for a BI project.
- Created Python libraries for platform issues: Tableau Hyper export threshold, ELT pipeline state monitoring.
- Built Clean Data Layer framework in Python to perform QC checks on all team datasets.

Data Analyst · [Infosys](#)

Feb 2019 – Oct 2021

- Published interactive Business Intelligence dashboards to Tableau Server.
- Performed analysis and proposed solutions leading to a 60% reduction in support tickets.
- Automated Tableau deployments using RLM tool.
- Designed and maintained templated visualisations for client-facing reporting deliverables.
